

LAX passenger traffic visualization via 2006-2016

Los angeles international airport terminals flow

The plot of sum of Passenger Count for Report Period Year broken down by Arrival Departure. Color shows details about Terminal. The view is filtered on Exclusions (Arrival Departure,Terminal,YEAR(Report Period)), which keeps 238 members.

This infographic visualized the data of Los Angeles international airport passenger traffic by terminal. Data is acquired from Los Angeles County Council. Data include 10 terminals arrival and departure passenger over 10 years. I represented data in shapes, motion and colors. I combined data of international and domestic. Data is visualized in different color. Different color represent different terminal. Also, when cursor is placed on the graph, a note prompt information about passenger number, years and terminal information interactively. When The area of different colors reflect the traffic of different terminals. Also this graph shows the different terminals' contribute to total traffic. And the the total traffic is increasing over years.
